CLAIMS

We claim:

An optical device comprising:

an imaging device for imaging an incident beam onto a focal surface;

a support element comprising at least one side having a shape corresponding to said focal surface, said side located on said focal surface; and

a sensor array in close contact with said one side of said support element.

- The optical device of claim 1, wherein said sensor array comprises at least 2. one photosensitive element mounted on a flexible structure.
- The optical device of claim 2, wherein said flexible structure conforms to said 3. shape of said one side of said support element.
- 4. The optical device of claim 2, wherein said flexible structure is bonded to said one side of said support element.
- 5. The optical device of claim 2, wherein said flexible structure has a thickness which ranges from about 1 micrometer to about 0.1 millimeters.
- The optical device of claim 1, wherein said sensor array comprises a 6. photodiode line.
- The optical device of claim 1, wherein said imaging device comprises a grating.
- The optical device of claim 1, whe ein said focal surface is defined by a 8. Rowland Circle.
